

This listing of claims will replace all prior versions, and listings, of claims in the application.

LISTING OF CLAIMS

1. (previously presented) A hearing device, comprising:

5 a radio device to transmit signals to a second hearing device, the radio device comprising:

 an antenna device to perform at least one of transmitting and receiving, the antenna device comprising a self-exciting oscillation circuit, including a coil and a first capacitor;

10 the radio device further comprising:

 a switch; and

 a second capacitor being connectable in parallel to the first capacitor by the switch, so that a resonance frequency of the self-exciting oscillation circuit can be modulated by switching
15 the switch.

2. (original) The hearing device according to claim 1, wherein the antenna device consists exclusively of an LC oscillation circuit.

20 3. (original) The hearing device according to claim 1 further comprising a receiving device comprising a median filter device configured to reduce noise signals.

4. (original) The hearing device according to claim 1, wherein a half-duplex
25 transmission line is established with the radio device.

5. (original) The hearing device according to claim 1, wherein a signal transmission is implemented in the long-wave range with the radio device.

6. (currently amended) A hearing device, comprising:

5 a receiving device configured to receive a plurality of values representing frequencies of at least one radio signal, the receiving device comprising a median filter device with which a median value of the plurality of values representing frequencies is determined for noise signal prevention; and

10 an antenna device with a self-exciting LC oscillation circuit, wherein the LC oscillation circuit generates a carrier frequency for transmission and clocks the median filtering by the median filter.

7. (cancelled).

15

8. (currently amended) The hearing device according to claim 6 ~~7~~, wherein the antenna device consists exclusively of the LC oscillation circuit.

9. (original) The hearing device according to claim 6, further comprising a
20 transmitter device configured to permit a half-duplex transmission line to be established with the receiving device and the transmitter device.

10. (original) The hearing device according to claim 6, wherein the receiving device is configured to receive in the long-wave range.

25

11. (original) The hearing device according to claim 6, wherein each of the plurality of values is a measure for a period duration of the self-exciting oscillation circuit.

5 12. (previously presented) A hearing device, comprising:

a radio device to transmit signals to a second hearing device, the radio device comprising an antenna device to perform at least one of transmitting and receiving, the antenna device comprising a self-exciting oscillation circuit;

10 a receiving device; and

an LC oscillation circuit that is configured both to generate a carrier frequency for transmission and to clock the receiving device.

13. (original) The hearing aid device according to claim 12, wherein the LC oscillation circuit is used to clock a filter device of the receiving device.

14. (previously presented) A hearing device, comprising:

a radio device to transmit signals to a second hearing device, the radio device comprising an antenna device to perform at least one of transmitting and receiving, the antenna device comprising a self-exciting oscillation circuit;

20 a receiving device configured to receive a plurality of values of at least one radio signal, the receiving device comprising a median filter device with which a median value of the plurality of values is determined for noise signal prevention; and

25 an antenna device comprising a self-exciting oscillation circuit comprising an LC oscillation circuit, wherein the LC oscillation circuit is used

both to generate a carrier frequency for transmission and to clock
the receiving device.

15. (original) The hearing aid device according to claim 14, wherein the LC
5 oscillation circuit is used to clock a filter device of the receiving device.

16. (currently amended) A method for noise signal reduction in hearing device
receiving signals, comprising:

10 transmitting signals by a radio device of a first hearing device to a second
hearing device,;

performing, by an antenna device of a radio device of the first hearing
device at least one of transmitting and receiving, the antenna
device comprising a self-exciting oscillation circuit;

15 receiving a plurality of values representing frequencies of at least one
radio signal via the first a hearing device; ~~and~~

median filtering of the plurality of values representing frequencies to
produce a median value for a noise signal reduction; and

providing an LC oscillation circuit that both generates a carrier frequency
for transmission and clocks the median filtering.

20

17. (currently amended) A hearing device, comprising:

a radio device to transmit signals to a second hearing device, the radio
device comprising an antenna device to perform at least one of
transmitting and receiving, the antenna device comprising a self-
25 exciting oscillation circuit;

a receiver for receiving a plurality of values of at least one radio signal via
a hearing device;

a median filter for median filtering of the plurality of values to produce a
median value for a noise signal reduction; and
~~providing~~ an LC oscillation circuit that both generates a carrier frequency
for transmission and clocks the median filtering.
